Rail systems

Strukton develops, builds, installs and maintains rail systems, ensuring optimum availability, reliability, safety and measurability.

Maintenance, renovation and new construction of railways and rail systems: heavy and light rail

Machines: modern working trains for new construction, renovation and maintenance of rail systems

Railway safety: implementation of safety systems in trains and on the track

Data acquisition and data management: collection and analysis of data about the condition of (rail) systems and translation of the data to create a maintenance concept

Train systems: technological solutions for electric train systems such as drive systems, on-board power transformers and vehicle control systems
